TITLE: Automatically generating code for integrating context-sensitive help
functions into a computer software application

DATE-ISSUED: June 12, 2001

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Feigner; Randall James	Kirkland	WA		
Walden; Ralph Everett	Redmond	WA		

US-CL-CURRENT: 345/708; 717/109, 717/113

ABSTRACT:

A computer software application includes multiple software components such as
graphical control objects. A help editor receives context-sensitive help
information associated with the graphical control objects. Using this help
information as well as information about the graphical control objects, the help
editor creates a header file and a map data structure. A help developer edits the
header file and map data structure to produce a configuration of context-sensitive
help functions for the computer software application. The help editor generates a
source code header file and a source code map data structure according to the user-
indicated configuration for integrating context-sensitive help functions into the
computer software application.
